

wobble boxes

- two is a combination of Perfect Matchings & Catalan #s

$$A-U-U-U-U = 2, \text{ empty, + } U-U \text{ bond}$$

$0=1 \quad \quad \quad k=5$

If we see the same idn. However, optimal needs to be as the notation #s.

What did we do here

Base case $\rightarrow$ if $len \leq 1 \rightarrow \text{return } 1$

0 4

Here the base case if $len \leq 4$, return 1

So if we do something more
~~the~~ dot wobble:

if $len(seq) \leq 4$
 return 1

~~the~~ var start = 0

~~for~~ $int i$

start = seq(0)
 for i in range(1, len(seq)-4)

if complement

left side

right side

count += left * right

flows all possible starts

This, we sum the last answer

A couple of places where I could be using notation

Then

Left top size 12/3
 A U A U A $\rightarrow 2$ ✓
 A U A U A U $\rightarrow 2$

thus ends

A A U U U U U $5 + 2 \rightarrow 7$

A U C U A U C U ~~A U C U~~

Hamming should be added for each base case

0 ~

u

A U C U A U C U 1, 2

A U C U A U C U $\emptyset, (A, U_1), (U, G_2)$
 (C, G_2)

Fair enough subset

This does work. Requires Big Int
